Professional Summary

Backend developer with 3 internships in enterprise software, DeFi, and SaaS. Built and shipped high-throughput **REST APIs**, **microservices**, and **financial transaction systems** with a focus on concurrency, low-latency design, and scalable architecture. Strong in Java, Node.js, and C++ with working knowledge of Linux, Python, and distributed systems. **Tech Lead** at the university dev club, directing teams on real-world projects, open source contributions, and technical workshops.

Work Experience

BHEL (Bharat Heavy Electricals Limited)

July 2025 – August 2025

Industrial Training - Computer Science

Bhopal, Madhya Pradesh, India

- Built a Python-based authentication module integrated with Oracle DB for BHEL's SAP ERP system, automating user credential validation and query sanitization across 3 departments.
- Replaced hardcoded credentials with parameterized query logic, eliminating SQL injection vulnerabilities in SAP ERP authentication workflows.

Quadb Tech

March 2025 – April 2025

Blockchain Development Intern

Remote

- Developed and deployed **5+ smart contract systems** across Ethereum, Solana, Aptos, and ICP — including a Lending-Borrowing Protocol with collateral logic, an SPL Token system, and a Web3 identity integration.
- Implemented reentrancy attack mitigations using checks-effects-interactions pattern and on-chain storage optimizations reducing contract execution costs.

Invvyu

March 2024 – May 2024

Software Engineer Intern

Remote

- Engineered an Employee Management System using React.js, Node.js, and Firebase for task allocation, shift scheduling, and leave approval workflows serving **200+ users**.
- Integrated geofencing-based attendance validation and automated alerts, reducing manual follow-ups by **40%**.

Technical Projects

Transaction Ledger API | Java 17, Spring Boot, PostgreSQL, Docker

- Built a low-latency financial transaction ledger API in Spring Boot with PostgreSQL, handling concurrent balance updates via JPA optimistic locking and atomic transfers with `@Transactional`.

Microservices E-Commerce Platform | Node.js, Express.js, React.js, Docker, RabbitMQ, MongoDB

- Microservices architecture with independent services for products, orders, payments, and auth, containerized with Docker, async messaging via RabbitMQ, and fault isolation across services.

VerdictXR | React.js, Three.js, ICP, Motoko, Google Gemini API

- AI-driven VR courtroom simulation with Three.js 3D environments, ICP blockchain for case record storage, and Gemini API powering AI judge/lawyer behavior. Qualified for national round of WCHL Hackathon.

CertifyHub | Next.js, Node.js, Solana, Web3.js

- Decentralized certification platform on Solana issuing tamper-proof NFT certificates with cryptographic proof of authenticity and full lifecycle management via Next.js and Node.js REST API.

Unified Inbox | Next.js, PostgreSQL, Prisma, Twilio, TypeScript

- SaaS communication tool for small businesses to manage SMS, WhatsApp, and email from one dashboard — built with Next.js, PostgreSQL, Prisma ORM, and Twilio API for bidirectional messaging with real-time webhook processing.

Technical Skills

- **Languages:** C/C++, Java, Python, JavaScript, TypeScript, Solidity, Rust
- **Frontend:** React.js, Next.js, Tailwind CSS, Material-UI
- **Backend:** Node.js, Express.js, Spring Boot, NestJS, GraphQL
- **Blockchain:** Ethereum, Solana, ICP — Hardhat, Web3.js, Ethers.js, IPFS
- **Databases:** PostgreSQL, MongoDB, Firebase
- **Messaging:** RabbitMQ
- **Tools & Platforms:** Git, Docker, AWS, Vercel, Postman, Linux

Education

University Institute of Technology RGPV

Bachelor of Technology in Information Technology

2026 Expected

Bhopal, Madhya Pradesh
