Professional Summary

Recent IT graduate with hands-on software development experience through 3 internships across enterprise software, SaaS, and distributed systems. Experienced in building backend systems, REST APIs, microservices, and API integrations using **Java, Spring Boot, and Node.js**. Strong foundation in **Data Structures & Algorithms, Object-Oriented Programming**, concurrency, and software engineering principles.

Work Experience

BHEL (Bharat Heavy Electricals Limited)

Industrial Training - Computer Science

July 2025 – August 2025

Bhopal, Madhya Pradesh, India

- Built a Python-based authentication module for BHEL's SAP ERP system integrated with Oracle DB, automating credential validation across 3 departments and eliminating SQL injection vulnerabilities via parameterized query logic securing authentication workflows across production systems.

Quadb Tech

Blockchain Development Intern

March 2025 – April 2025

Remote

- Developed and deployed 5+ smart contract systems across Ethereum, Solana, Aptos, and ICP — including a Lending-Borrowing Protocol and SPL Token system; implemented reentrancy mitigations and on-chain storage optimizations within a cross-functional team to ship production-ready DeFi protocols.

Invyu

Software Engineer Intern

March 2024 – May 2024

Remote

- Engineered an Employee Management System using React.js, Node.js, and Firebase for task allocation, shift scheduling, and leave approval workflows serving **200+ users**.
- Integrated geofencing-based attendance validation and automated alerts, reducing manual follow-ups by **40%**.

Technical Projects

Transaction Ledger API | Java 17, Spring Boot, PostgreSQL, Docker

- Architected a financial transaction ledger API in Spring Boot with PostgreSQL, prioritizing concurrency safety via JPA optimistic locking and `@Transactional` atomic transfers to prevent race conditions; developed unit and functional test suites for transfer logic and monitored API latency and error rates via Docker logs to ensure operational reliability.

Microservices E-Commerce Platform | NestJS, GraphQL, MongoDB, RabbitMQ, Docker

- Built a fully containerized microservices platform with independent services for inventory and customer management; GraphQL APIs for structured data access, async inter-service messaging via RabbitMQ, and Docker Compose orchestrating all services.

Credit Approval System | Python, Django, Django REST Framework, PostgreSQL, Docker

- Built a loan eligibility REST API with 5 endpoints in Django REST Framework and PostgreSQL; engineered a custom credit scoring engine (0–100) evaluating repayment history, EMI-to-salary ratio, and loan volume with tiered interest rate correction; containerized with Docker Compose and validated with 20 unit tests.

Unified Inbox | Next.js, PostgreSQL, Prisma, Twilio, TypeScript

- SaaS communication tool for small businesses to manage SMS, WhatsApp, and email from one dashboard. Built with Next.js, Prisma ORM, and Twilio API for bidirectional messaging with real-time webhook processing.

Technical Skills

- Languages & Core CS:** Java, Python, C/C++, JavaScript, TypeScript; Data Structures & Algorithms, OOP
- Frontend:** React.js, Next.js, Tailwind CSS, Material-UI
- Backend:** Node.js, Express.js, Spring Boot, NestJS, REST APIs, GraphQL, RabbitMQ
- Databases:** SQL (PostgreSQL), MongoDB, Firebase
- Tools & Platforms:** Git, Docker, AWS, Vercel, Jest, Postman, Linux
- Blockchain:** Ethereum (Solidity), Solana (Rust), ICP — Hardhat, Web3.js, Ethers.js, IPFS

Education

University Institute of Technology RGPV

Bachelor of Technology in Information Technology

June 2026

Bhopal, Madhya Pradesh
